48409/48709: History and Future of Interaction Design

Units: Undergrad 48409 9 units | Grad 48-709 12 units

Instructor: Paul Pangaro

Course Description

The history of Interaction Design (IxD) is far richer than what is commonly known among students and teachers, practicing designers and entrepreneurs. Understanding IxD's origins and evolution helps us realize the promises and possibly avoid some of the pitfalls of IxD's future. This course blends readings, lectures, discussions, and especially prototyping as a means for students to experience this history as if first-hand. Students become immersed in pragmatic yet mind-expanding examples of person-machine interactions—such as MEMEX, Musicolour, Hypertext, Dynabook, Fun Palace, Colloquy of Mobiles, Architecture Machine, THOUGHTSTICKER, Architrainer, and Hypercard. Through period articles and subsequent perspectives, students research a handful of historical innovations—and then prototype key concepts from that history in short sprints, forefronting what has been lost in modern commercial implementations. This offers students a hands-on experience of the history of IxD. To explore IxD's future, students are invited to invent it—to prototype their individual future vision of interactive experiences. The course is especially suitable for students with interest or background in interaction design, computational design, responsive architecture, and interactive media.
